

Pierce® Tankers

Pierce offers a wide variety of products to meet your tanker and water tender needs.

BX™ Tanker

The BX™ Tanker is an entry level offering with the most popular tanker/ tender features at a competitive price. The BX™ Tanker is available in both single axle (2,100 gal.) and tandem axle (3,000 gal.) on a Freightliner chassis. Standard features include an aluminum body with integral hard-suction hose storage compartment and roll-up door compartments with LED lighting. Available with 500 or 1,000 gpm PTO driven pumps.

Commercial Wet-Side Tanker

The commercial wet-side platform combines all the standard features of the BX platform with the flexibility to provide additional choices. Providing both the single axle 2,100 gallon and tandem axle 3,000 gallon water tank, an aluminum body with integral hard suction hose storage compartment, and roll-up door compartments with LED lighting. The wet-side tanker is available with Freightliner and International chassis, a variety of water pump offerings from 500 to 1,500 gpm in PTO and midship, and lighting options to meet the needs of most fire departments.

Commercial Dry-Side Tanker

The Pierce® commercial dry-side tanker provides flexibility when configuring a tanker. Options include water tank capacities from 1,500 to 4,000 gallons, body compartmentation to carry loads of equipment, and multiple storage options. This configuration is a great choice for departments that need a multi-use vehicle in their fleet that has a primary mission as a tender/tanker or a front line engine that brings more water to the scene.

Custom Dry-Side Tanker

The Pierce® custom dry-side tanker is the do-all, everything tanker. The body provides a heavy-duty construction and customization for packaging the combination tanker – engine. This configuration has safety features of the Pierce custom chassis product line and the full line of options to package a truck that is prepared for the mission required.

PUC™ Tanker

By adding a PUC™ water pump, departments are able to eliminate the pump house and build their apparatus around their needs instead of the pump. A custom PUC tanker minimizes vehicular space used for fire suppression and maximizes space for more water-hauling potential and storage of equipment.

Mission-focused with features to match.

The Pierce® engineered BX™ Tanker has the options to meet the needs of any department with a cost conscious focus for a water tanker/tender.

- Body compartmentation with high side and low side compartments
- Dump valves on the sides and rear for water shuttle needs
- Portable tank storage mounting available
- LED scene and warning lights

BX™ TANKER SPECS

Commercial Chassis	Freightliner M2-106 6x4 Freightliner M2-106 4x2 Freightliner 114SD 6x4
Overall Height	9' 5"
Tank Capacities	Single axle: 2,100 gallons Tandem axle: 3,000 gallons Lifetime warranty
Tank Dumps	10" Newton with optional swivel Sidewinder option for reduced overall length
Lower Compartment Load Capacity	500 lb
Body Material	Aluminum
Body Warranty	10-yr structural

COMMERCIAL WET-SIDE TANKERS

Mission-focus with the flexibility needed.

The Pierce® commercial wet-side tanker has the features of the BX™ Tanker while providing an additional level of flexibility to provide more option choices for departments.

- Multiple chassis options to meet your product model and horsepower needs
- Body compartments and water tanks designed with a tanker purpose
- Options available for dump valve, portable tank storage, and mission critical options for a tanker

COMMERCIAL WET-SIDE SPECS

Big on storage. Big on flexibility. Big on performance.

When your department requires an all-purpose vehicle to perform the dual roles of water transport and on-the-spot firefighting, Pierce brings you a variety of options. Each tanker is designed to accommodate the fire department's water, foam, and equipment storage needs.

Virtually limitless plumbing options.

If it's available on a pumper, it's also available for a tanker. Whether it's side control, a top-mount pump house or a Husky™ Foam System, we offer a huge variety of pump house configurations and arrangements to meet the ever-changing needs of every department.
